The DJ set planner for everyone. No decks needed. Just a laptop, your music and an idea of where the night should go.
DJ SET PLANNER · MAC + WINDOWS · TOMALAB.APP

WHO IT'S FOR

If you love mixes, it's for you.

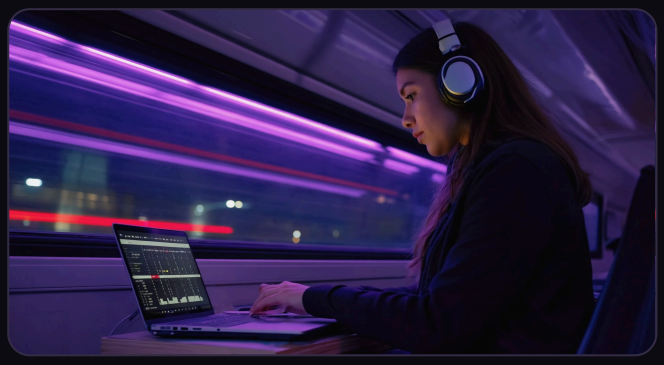

You don't need a booth, a controller or years of practice. TomaMix lays your music out like a song in a studio app, so you can build a whole set with a mouse, hear every transition, and keep it.

NO GEAR? NO PROBLEM

You want to make mixes, not buy decks

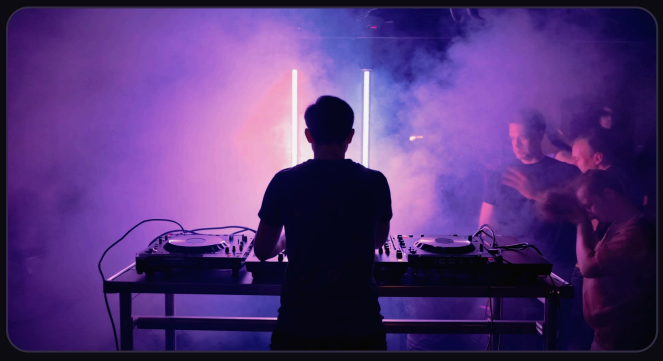

Build a full mix on your laptop: drag tracks in, draw the bass swaps and filter sweeps, and render it to WAV or MP3 to share.

PLAN AHEAD

You like to know where the night is going

Order the set, check keys, tempo and energy on one chart, and fix the rough spots on the train, not at the club.

PLAY THE GIG

You play out and want to walk in ready

Export to Rekordbox with every cue, loop and mix point in place, the playlist in order, and a rendered mix to rehearse with.

SHARE YOUR SOUND

You make mixes for radio, podcasts or streams

Loudness-matched tracks, a LUFS meter and a clean render, plus a tracklist with timestamps ready to paste under the upload.

Learning to DJ

See what a good transition looks like and hear why it works, one bar at a time.

Producers

Test how your tracks mix with others before you send them out.

Record collectors

Tag, rate and sort your library into playlists and smartlists.

HOW IT WORKS

From a folder of tracks to a set you can play.

Your whole set sits on one timeline. Every track is a clip, and where two clips overlap, that's the transition. Drag it, draw it, hear it.

A six-track set: arrangement and master tempo on top, the selected transition below, mixer on the right.

01

Drop in your tracks

MP3, WAV, AIFF, FLAC or M4A. TomaMix finds the BPM, beat grid, key, phrases, sections and loudness, and lays the set out. Or let ✦ Suggest order find a harmonic, tempo-smooth running order.

02

Shape every transition

Drag overlaps, slide and trim clips, line up phrases. Draw volume, EQ, filter and echo on the waveforms, or pick a preset. The tempo moves where the kick drops out.

03

Take it anywhere

Export to Rekordbox with cues, loops and playlists. Render the mix to WAV or MP3. Print the set overview. Everything you hear in preview is what you get.

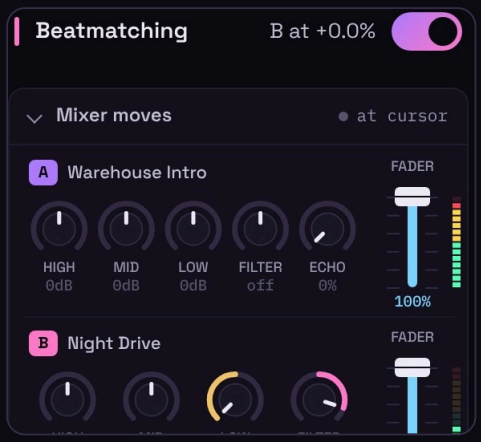

Arrange, mix and move the tempo.

ARRANGEMENT

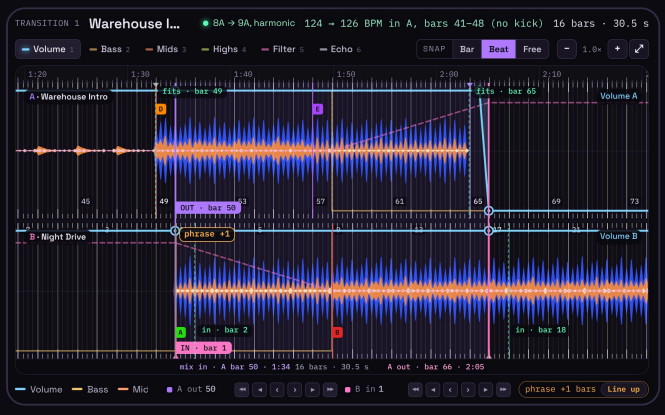

- **Whole set on one timeline**, overlaps are transitions, with energy line and harmonic dots
- **Deep zoom** down to single beats, with a bar and beat ruler
- **Slide** a track against the previous one, snapping to phrase, bar or beat
- **Trim** where a track starts and stops
- **Split and join** a track and play its parts in different places
- **Mix anywhere:** transitions from 1 to 256 bars, B can come in while A has minutes left

FILTER AND ECHO ANYWHERE TOMAMIX

- **Filter and Echo** drawn anywhere along the set
- On the **master**, or on one **clip** so the move travels with it
- Ready-made moves: HPF build-up, LPF sweep, echo throw, echo out

The live mixer panel PRO: EQ kills, colour filter, echo.

TRANSITIONS

- Deck A over deck B with beat grid and **phrase markers**
- Presets for **volume, EQ, filter, echo, loops and tempo**
- Draw your own moves on six lanes: **Volume, Bass, Mids, Highs, Filter, Echo** TOMAMIX
- ✦ **Auto** picks the style from keys and tempo PRO
- **Phrase line-up**: see when A and B are in phrase, one key to fix it PRO
- Snap to bar, beat or free, down to 1/16 beat
- DJM-style mixer panel with meters that moves as you play PRO

MASTER TEMPO

- One **tempo lane** for the whole set; synced tracks follow it
- **Tempo changes where the kick drops out**: TomaMix finds every kick- and bass-free part of a track and ramps the tempo there, so nobody hears it PRO
- Hold, ramp during or after the mix, or jump
- Draw the curve by hand, down to **0.01 BPM** PRO
- An amber hint when the tempo moves under a kick

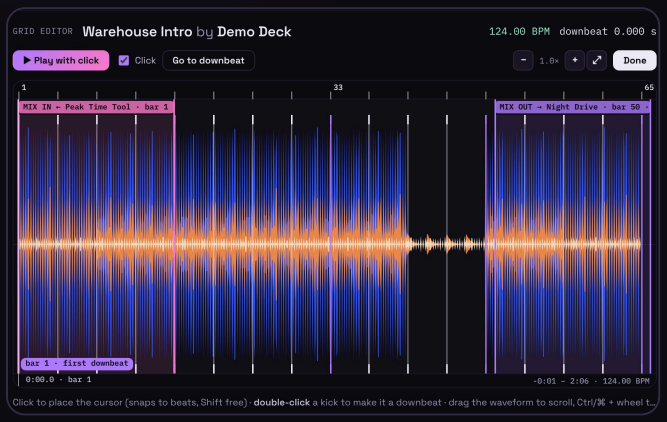

Hatched no-kick zones and the master tempo lane.

Know your tracks inside out.

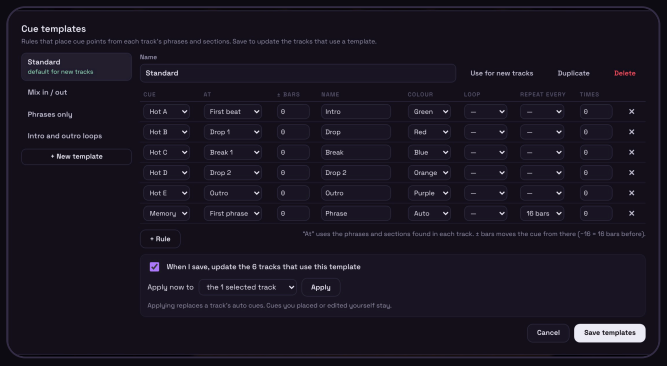

ANALYSIS AND GRID

- Automatic **BPM, beat grid and downbeat**, snapped to whole BPM where it fits
- **Key detection** from the audio, shown with its confidence
- **Phrases and sections**: intro, drop, break, outro
- **Grid editor**: see and hear the grid with a click track, double-click a kick to fix the downbeat, tap tempo

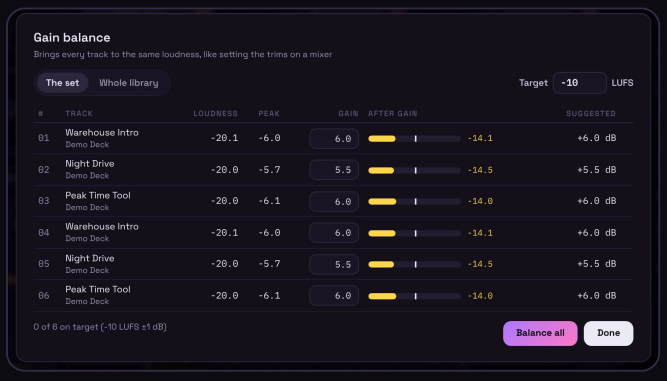

CUES

- **Hot cues A–H**, memory cues and loops per track
- **Repeat cues** every 4, 8, 16 or 32 bars
- **Auto cues** from the phrases and sections PRO
- **Cue templates**: change one and every track that uses it updates PRO

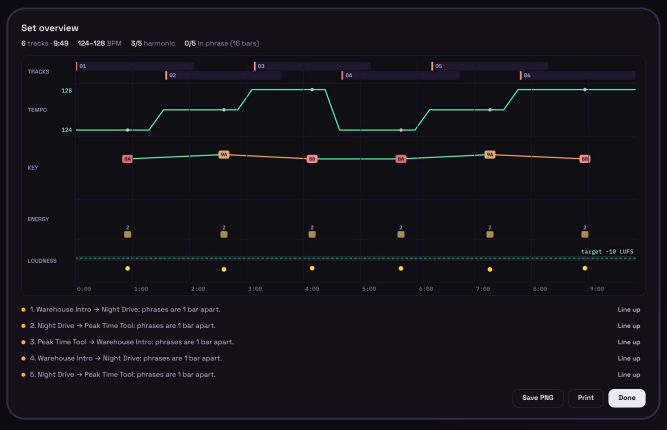

LIBRARY AND SET ORDER

- **Playlists, folders and smartlists** with rules
- **Tags, energy 1–10 and bass type**; edit many tracks at once
- **Suggested next** by key, then BPM PRO
- ✦ **Suggest order**: the smoothest running order by key, tempo and energy PRO

LOUDNESS

- **LUFS** and peak for every track, auto-gain to a target
- **Gain balance** for the whole set in one click, to a loudness target TOMAMIX
- **Master and channel meters**, and the set overview chart
- **Set checks**: key clashes, phrases, loudness jumps and tempo gaps in one list TOMAMIX

Take it to the booth, or to the world.

EXPORT · TOMAMIX AND PRO

- **Rekordbox XML**: beat grids, hot and memory cues, loops, mix points, playlists and folders, real file paths
- Energy to rating, tags to comments, bass type to grouping
- **Render** to WAV or MP3 320, streamed to disk for long sets
- **CUE sheet, M3U8** and a timestamped **tracklist**

WORKFLOW

- **Set overview**: tempo, keys, energy and loudness on one chart, save as PNG or print
- **Undo and redo** for every edit
- **Your own hotkeys**, settings for loudness and export
- **Autosave** and portable project files
- Edits heard in about 0.1 s while it plays

ROADMAP

Where TomaMix is going.

5 NOVEMBER

Version 1.0

Everything in this brochure, on Mac and Windows

✦ **Harmonize** PRO: a one-click first draft, your tracks ordered and the transitions placed on phrases, ready to edit

NEXT

In the lab

Key lock TOMAMIX: beatmatch without changing the pitch

MIDI recording PRO: play moves on your controller into the lanes

More effects PRO: reverb, then spinback and flanger

Rekordbox library import PRO

Watch folders and **Mixcloud upload**
